Q. (points)

- 1) 2 A tornado at Mytown translates due east toward Yourtown.  
 But the depth of the rotating mesocyclone doesn't change.  
 The tornado has a non-zero relative vorticity at Mytown.  
 When the tornado reaches Yourtown, the relative vorticity  
 will likely \_\_\_\_\_ relative to its value at Mytown.

A	B	C	D	E
increase	remain the same	decrease	be zero	change sign

- 2) 2 Which type of thunderstorm often produces lots of hail?

A	B	C	D	E
low precipitation supercell	classic supercell	high precipitation supercell	hybrid supercell	multi-cell

- 3) 3 At latitude 55°N, the height gradient ( $\Delta z/\Delta d$ ) of the 40 kPa isobaric surface is 60 m per 100 km.

The speed (m/s) of the geostrophic wind is approximately

A	B	C	D	E
40	50	55	60	65

- 4) 2 Given the Doppler radar display below (Fig 1), if the radar is located at position E, then the weather at location E is

A	B	C	D	E
gust front convergence zone	divergence zone under a downburst	cyclonically rotating tornado	anti-cyclonic rotating tornado	southeast wind

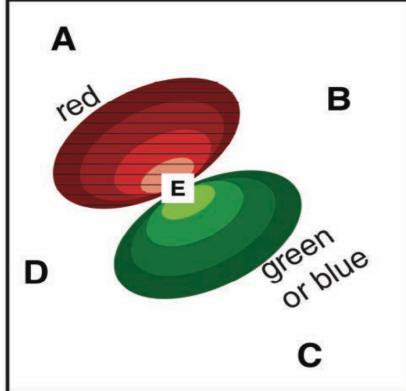

Fig. 1.

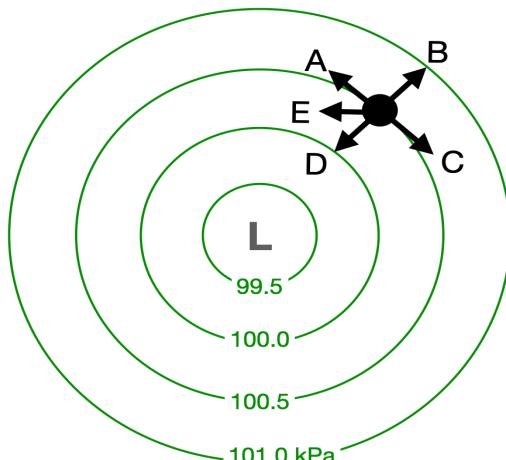

Fig. 2.

- 5) 2 In the Fig. 2 sketch of a mid-latitude cyclone in the Northern Hemisphere, which vector represents the likely boundary layer wind direction for the sketched air parcel (black dot)?

A	B	C	D	E

- 6) 2 For that same cyclone in Fig. 2, which vector represents the likely direction of pressure-gradient force at the air parcel (black dot)?

A	B	C	D	E

- 7) 3 Given temperature  $T = 30^\circ\text{C}$  and water vapor mixing ratio  $r = 20 \text{ g/kg}$ . What is the virtual temperature ( $^\circ\text{C}$ )?

A	B	C	D	E
35.6	40.6	313.6	675.5	5671.4

Fall 2021

- 8) 3 Given a MLCAPE area of 75 K·km.  
 What is the approximate MLCAPE value (J/kg) ?  
 Hint, use  $|g/T_e| = (9.8 \text{ m/s}^2) / (253 \text{ K}) = 0.0387$

A	B	C	D	E
2905	2475	1460	1205	950

- 9) 1 What thunderstorm and tornado severity would you forecast, based on the CAPE from the previous exercise?

A	No thunderstorm (CB)
B	Ordinary thunderstorm
C	Marginal supercell
D	Supercell, possibly with EF0 – EF1 tornado
E	Supercell, possibly with EF2 – EF5 tornado

- 10) 7 Plot the following sounding (T, Td) on the attached Skew-T diagram.  
 Put your name on it, and turn it in with the rest of your exam.  
 (You will also use it to help answer the subsequent questions.)

Approx. Height, z (km)	Pressure, P (kPa)	Temperature, T (°C)	Dew Point, Td (°C)	Wind Direction, α (°)	Wind Speed, M (m/s)
	20	-55			
	25	-55			
6	44	-25		330	40
5	52	-13		300	30
4	60	-2		270	20
3	70	9		240	15
2	80	11		210	10
1	90	22		180	5
0	100	33	14	calm	0

- 11) 3 For air at  $z = 0$  in this sounding, what is the approximate relative humidity(%)?

A	B	C	D	E
10	14	25	30	50

- 12) 3 For air at  $z = 0$  in this sounding, what is the approx. wet-bulb temperature(°C)?

A	B	C	D	E
33	44	39	25	21

- 13) 2 Based on the sounding above, at what pressure (kPa) is the tropopause?

A	B	C	D	E
20	25	30	35	40

- 14) 2 Based on the sounding above, at what pressure (kPa) is the top of the convective boundary layer?

A	B	C	D	E
85	80	75	70	65

For the next several questions, use the sounding above, and consider an air parcel rising from the surface.

- 15) 1 The lifting condensation level (LCL) is near what pressure (kPa)?

A	B	C	D	E
85	80	75	70	65

- 16) 1 The level of free convection (LFC) is near what pressure (kPa)?

A	B	C	D	E
74	66	58	50	42

- 17) 1 The equilibrium level (EL) is near what pressure (kPa)?

A	B	C	D	E
52	44	39	25	21

18) 7 Plot a hodograph using the winds given in the sounding from question 10.

19) 2 Using your hodograph from question 18,  
What is the approximate "normal" storm motion direction and speed?

A	B	C	D	E
204° at 11 m/s	215° at 15 m/s	240° at 14 m/s	290° at 13 m/s	110° at 12 m/s

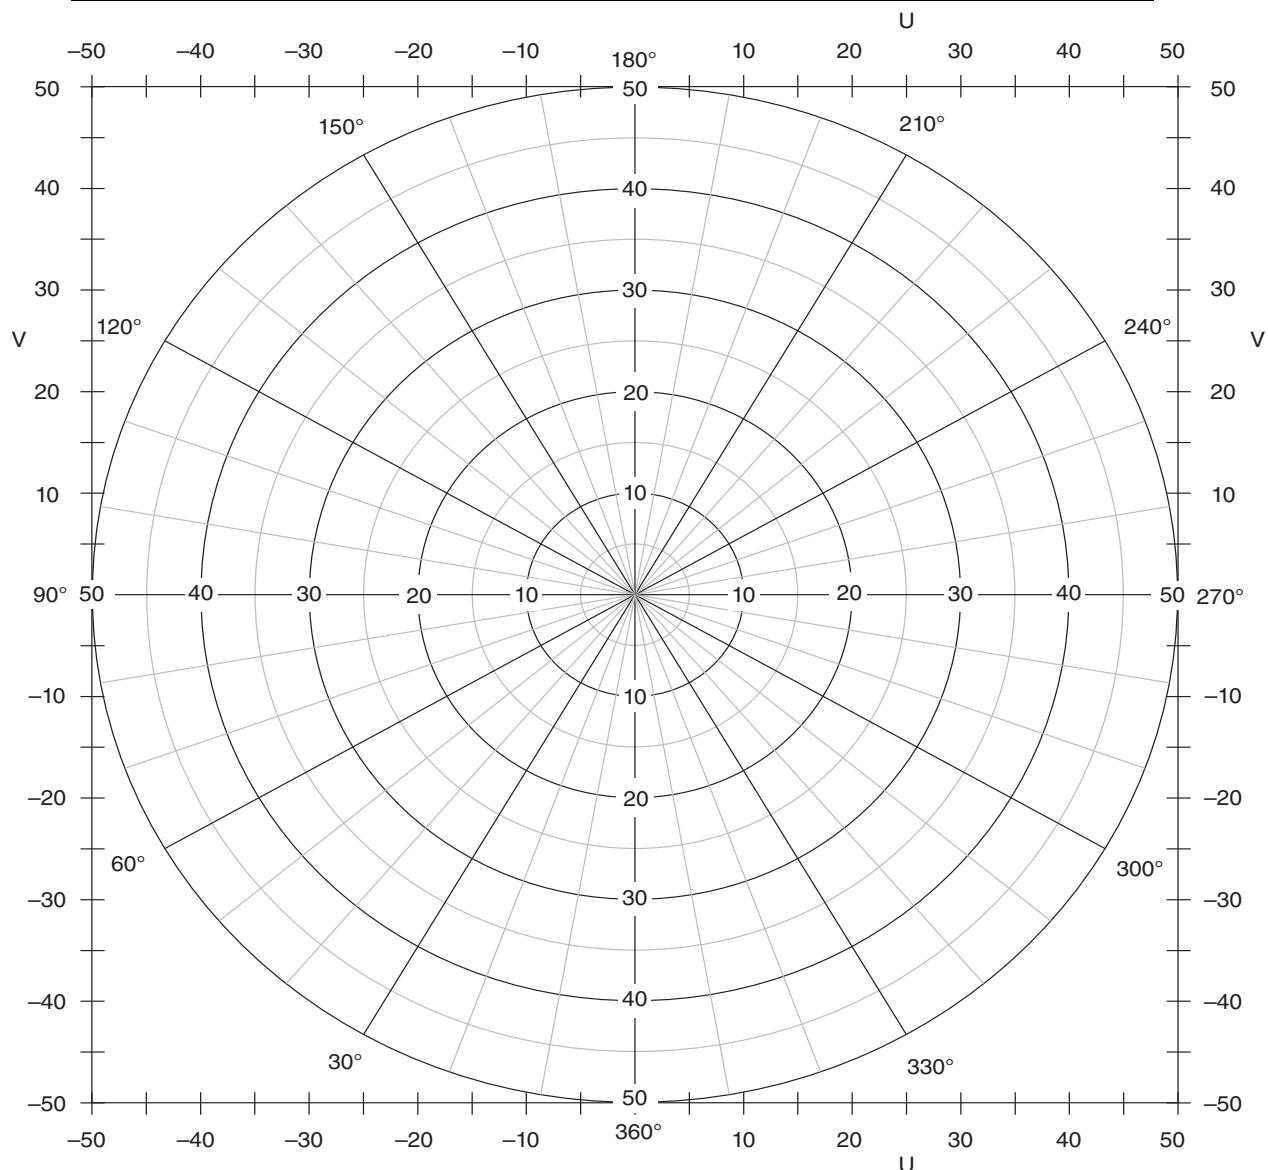

20) 1 Using your hodograph from question 18,  
If a thunderstorm splits into two storms, which one will likely dominate?

A	B	C
left-moving	both will remain roughly equal strength	right-moving

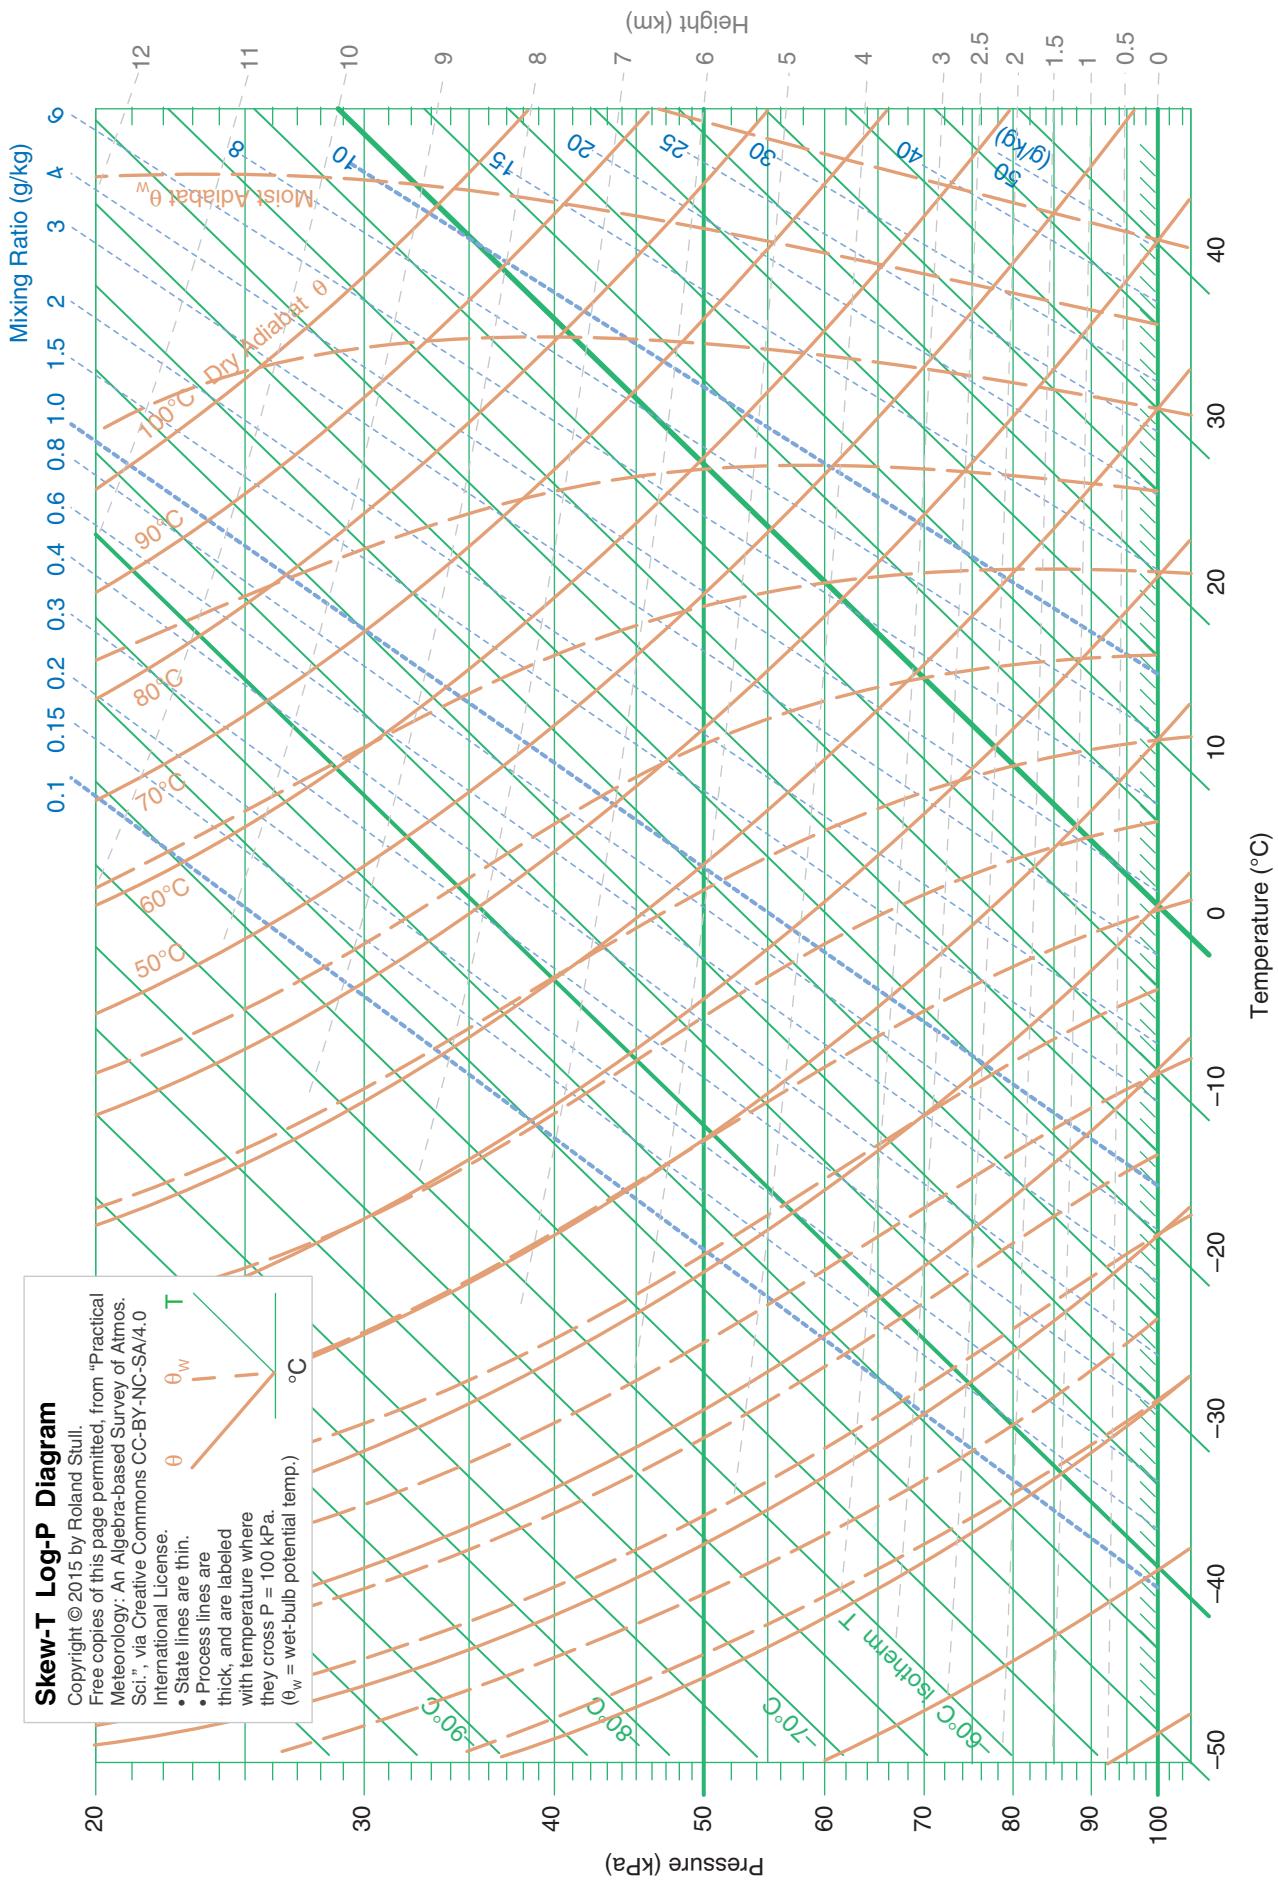

Optional  
Bonus  
worth  
5  
points

Use the sounding from question (10). What is the approximate surface-based CAPE area (K· km)? (Hint, break the total area into a few simple triangles and rectangles or trapezoids, instead of counting small slices.)

A	B	C	D	E
25	35	45	55	65

## TEST FORM

- (A)
  - (B)
  - (C)
  - (D)

LAST NAME

A grid of 40 numbered circles, each containing a letter from A to Z. The letters are arranged in a pattern: Row 1: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 2: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 3: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 4: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 5: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 6: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 7: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z. Row 8: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z.
