The economic viability of small-versus large-scale fisheries: an example from Mexico

Anna Schuhbauer
PhD candidate, RMES and IOF

Anna’s career as a fisheries scientist started with the German Fisheries Department in Hamburg in 2002. She has worked in northern Peru (2005), finished her MSc at the University of Bremen in Germany (2006), worked in the Falkland Islands Fisheries Department (until 2008) and then in the Charles Darwin Foundation on the Galapagos Islands (until 2012). After her work in Galapagos, which focussed mainly on the ecological aspects of fisheries, she decided to study global fisheries economics, focussing on small-scale fisheries and their economic viability. Since 2012 Anna has been at the Fisheries Centre, now Institute for the Oceans and Fisheries at UBC as a PhD student under the supervision of Dr. U. Rashid Sumaila with the Fisheries Economic Research Unit.
