

GEOLOGY MEETS ARCHAEOLOGY ALONG THE B.C. COAST

September 12, 2017

9:00 am - 5 pm

Peter Wall Institute

6331 Crescent Rd.

UBC

September 13, 2017

10:30 am - 5 pm

Workshop seating is limited. Please RSVP to Andrew Martindale andrew.martindale@ubc.ca to request admission.

The earliest archaeological evidence in North America dates from the end of the Pleistocene, over 14,000 years ago. Humans living during the subsequent several thousand years faced ongoing challenges as climate and sea level transformed dramatically while the continental ice sheets melted. The geology of their landscapes, the archaeology and geochemistry of their material records, and the oral traditions of their ancestors represent this history. This workshop brings together experts on the geology, climatology, and archaeology of the west coast of North America to document environmental changes impact on population evolution.

Guest Speakers:

Edouard Bard
College de France

Charles Menzies
UBC Department of Anthropology

Philippe Claeys
Free University Brussels

Dominique Weis and Rhy McMillian
UBC Pacific Centre for Isotopic and Geochemical Research

Daryl Fedje
University of Victoria/ Hakai Institute

THE UNIVERSITY
OF BRITISH COLUMBIA
